1. Introduction

adHome is the September 2008 Joomla! template from BonusThemes.com.

adHome is a new dazzling template primarily built for professional estate agents. With adHome's flexible design you may also use it for a variety of other types of websites too.

Read the following sections to find detailed information and illustrated examples that explain the ways you can use the template.

2. General information

2.1 Required software

adHome works with Joomla! 1.5.x and it is recommended to use the latest version available.

Visit <http://www.joomla.org> to find which is the latest available version for Joomla!. If you are not sure which version you are using at the moment, login to the administrator control panel and locate the version number on the top right corner of the page.

2.2 Browser compatibility

adHome is compatible with:

- Firefox 3
- Firefox 2
- Safari 2
- MS Internet Explorer 7
- MS Internet Explorer 6

3. Template installation

To install the template you can use the Joomla! installation mechanism:
Extensions > Install/Uninstall

Alternatively, you may unpack the template in the /template directory.

To activate the template go to
Extensions > Template Manager
select the template and click the “Default” button.

Read Appendix A for illustrated examples on how to install and activate a template.

4. Layout

The layout of adHome provides 27 regular module positions and 5 invisible positions for supplementary services.

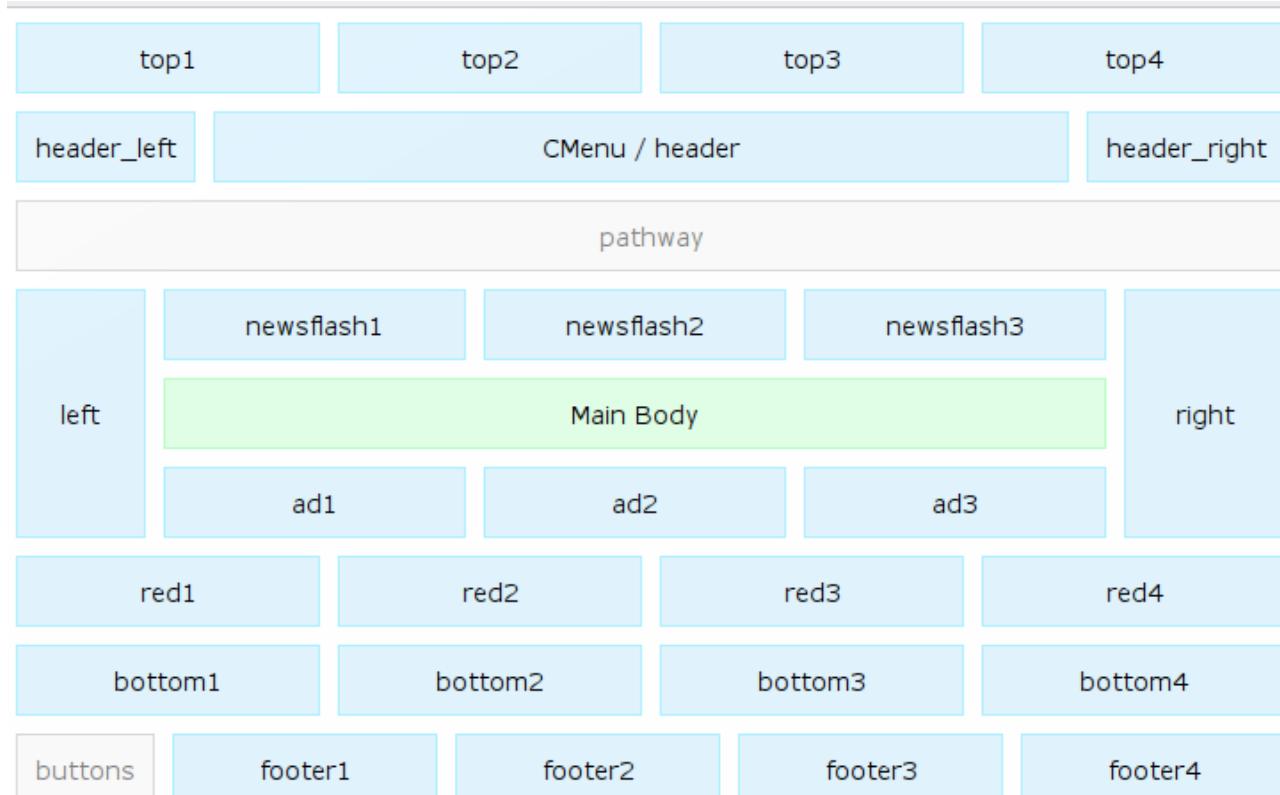

This template uses a collapsible module technology. That makes these positions disappear if there are no published modules in them. This feature gives you the capability to make arrangements for wider space in your pages.

On the top of its layout, adHome uses CMenu a menu script that takes input from a Joomla menu. You have the option of disabling this menu and have a module position in its place. This can be set from the Template Manager and the name of the position that replaces CMenu is “header”.

4.1 Template map

Map of regular module positions for the template adHome.

adHome also supports 5 hidden positions for supplementary services. Read section 5.8 for more information.

4.2 CSS structure

adHome uses the main Joomla template CSS file for typography and other general styling. That main file is /templates/bt_adhome/css/template.css.

The file /templates/bt_adhome/css/layout.css contains CSS definitions that control the layout.

The file /templates/bt_adhome/css/cmenu.css contains CSS definitions that control the layout of CMenu, the script for the menu on the top area.

Naming system for module positions:

The IDs of the <div> tags that wrap the template positions always start with “pos_”. For example the module position “user1” takes the id “pos_user1”.

4.3 Module Suffixes

There are 3 module suffixes that match the styling of the template.

mstyle1

mstyle2

mstyle3

5. Template setup

5.1 Logo setup

To setup your logo, publish a “Custom HTML” module with an uploaded image in any template position.

Example:

1. Upload your logo on your website
2. Create a new “Custom HTML” module that contains the URL of the image you just uploaded
3. Publish that module in a suitable position

You are free to publish your logo in any position.

5.2 Banner setup

To setup a banner, publish a banner module in any template position.

5.3 How to show/hide the BonusThemes logo

You can show or hide the BonusThemes logo from
Extensions > Template Manager

5.4 PNG fix

MS Internet Explorer 5 and 6 have trouble rendering the alpha levels (transparencies) of PNG images.

The

template is equipped with a script that fixes this problem. To enable transparencies in PNG files for MS Internet Explorer 5 and 6, use the CSS class “pngfix”. In some cases images appear distorted. To avoid this distortion provide “width” and “height” attributes in your `` HTML tags. Alternatively, you can try the CSS class “pngfix_static”.

PNG fix’s website:

<http://www.twinhelix.com>

5.5 How to enable/disable CMenu

CMenu (Classic Menu) is the menu that appears on the top of the page.

If you want to use a module instead of CMenu you can disable it from
Extensions > Template Manager

locate the option “Header Menu Type” and set it to “Position Header”. You can now publish your module in the position “header”.

5.6 How to set the Joomla menu for CMenu

CMenu by default shows the contents of the Joomla menu “topmenu”.

In order to change the content of CMenu, go to
Extensions > Template Manager

and use the option “Header Menu Name”.

5.7 How to enable/disable the SEOCP feature

SEOCP (Search Engine Optimization Content Positioning) is a feature that controls the position of the main content of the pages.

When SEOCP is enabled the content is internally positioned on the top of the HTML code and this helps search engines find and analyze the content easier. When the page loads, a JavaScript script moves the content to the proper position so that the visual structures can display it in the way the human eye can understand better.

SEOCP needs JavaScript to work. This means that users with JavaScript disabled will not be able to read the content of the page.

By default, SEOCP is disabled. To enable SEOCP go to
Extensions > Template Manager

and use the option “SEOCP”.

5.8 Hidden module positions

adHome includes 5 hidden positions for supplementary functionality. The names of these positions are “aux1”, “aux2”, “aux3”, “aux4”, “aux5”.

5.9 Custom menu styling

The adHome template has a default way of laying out menus. It uses a specific set of CSS rules that may not appear nice in exception cases. One such exception is a horizontal menu.

To make the template ignore the default layout for menus you can use a custom “Menu Class Suffix”. This should not be confused with “Module Class Suffix”. From the administrator’s control panel go to Extensions > Module Manager

open the menu module that needs to have a different layout, open the “Advanced Parameters” panel on the right side of the page and set the “Menu Class Suffix” to any value (type for example “mystyle”) and click the “Save” button.

5.10 How to set the width of any position

To set the width of a module position in the template go to Extensions > Template Manager

click the adHome template and use the “Position widths” text box.

You can simply type the name of the template, a semi-colon and a width in pixels. Each line should have one setting.

Example:

top1:160

right:200

red4:350

To set the width of the main body use the keyword: “mainbody”.

Example:

mainbody:700

5.11 Search module recommended setup

The recommended area for publishing the search module is in any of the “top1”, “top2”, “top3” or “top4” positions.

You should also enable the “Search button” and the “Search button as image” options. In order to do that go to the Module manager, select the search module and locate these options on the “Parameters” panel.

Read Appendix B for illustrated examples on how to set up modules.

Appendix A - How to install a template

To install a template in Joomla! 1.5.x follow the next 6 steps:

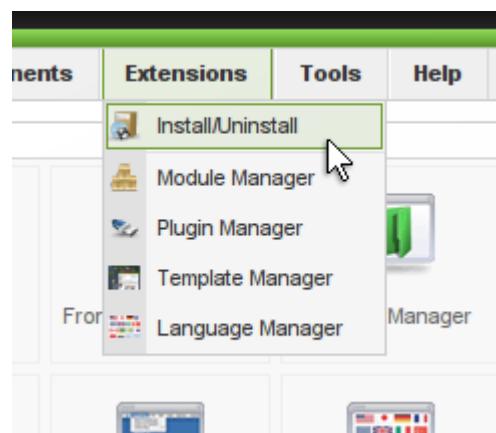

Step 1

Get into the administrator's control panel with your browser.

The URL usually looks like

<http://www.example.com/administrator/>

Step 2

Go to the menu *Extensions > Install/Uninstall*

Step 3

A screenshot of the Joomla! Extension Manager. At the top, there is a logo and the title 'Extension Manager'. Below the title, a horizontal menu bar has tabs: 'Install' (which is underlined in blue, indicating it is selected), 'Components', 'Modules', 'Plugins', 'Languages', and 'Templates'. Under the 'Install' tab, there is a section titled 'Upload Package File'. It contains a 'Package File:' input field with a 'Browse...' button to its right. Below this, there is a link 'Install from Directory'. At the bottom right of the screen, there is a large mouse cursor pointing towards the 'Upload File & Install' button.

Click the *Browse* button to find the archive of the template, and then click *Upload File & Install* to perform the installation procedure.

Step 4

The screenshot shows the Joomla Extension Manager interface. At the top, there's a navigation bar with tabs: Install, Components, Modules, Plugins, Languages, Templates, and others. Below the navigation bar, a blue header bar displays the message "Install Template Success". The main content area contains text about the "Easygate" template and a link to "http://www.bonusthemes.com". At the bottom, there's a form titled "Upload Package File" with a "Package File:" input field, a "Browse..." button, and a "Upload File & Install" button.

If the installation was successful you will be able to see a success message like the one in the image.

Step 5

The screenshot shows the Joomla Extensions Manager. The top menu bar includes "Extensions", "Components", "Tools", and "Help". Below the menu, there's a sidebar with links: "Install/Uninstall", "Module Manager", "Plugin Manager", "Template Manager" (which is highlighted with a green box and a cursor), and "Language Manager". The main content area is currently empty.

The next thing to do is to activate the template.

Go to *Extensions > Template Manager*

**Step 6**

The screenshot shows the Joomla! Template Manager page. The toolbar at the top includes Site, Menus, Content, Components, Extensions, Tools, Help, Preview, Edit, and Logout. The main area is titled 'Template Manager' and shows a list of templates. The first template, 'beeze', is selected. The second template, 'bt_easygate', is highlighted with a yellow circle labeled '1'. The third template, 'JA_Purity', has a yellow star icon next to it. The fourth template, 'rhuk_milkyway', is also listed. The toolbar on the right includes a yellow star icon, a pencil icon, and a 'Default' button. A yellow circle labeled '2' highlights the 'Default' button.

#	Template Name	Default	Assigned	Version	Date	Author
1	beeze			1.0.0	19 February 2007	Angie Radtke/Robert Deutz
2	bt_easygate			1.0	August 2008	BonusThemes.com
3	JA_Purity	★		1.2.0	12/26/07	JoomlArt.com
4	rhuk_milkyway			1.0.2	11/20/06	Andy Miller

From the *Template Manager* page click on the template name you just installed and then click the *Default* button to make that template the default one.

Appendix B - How to setup a module

To setup a module in Joomla! 1.5.x follow the next 4 steps:

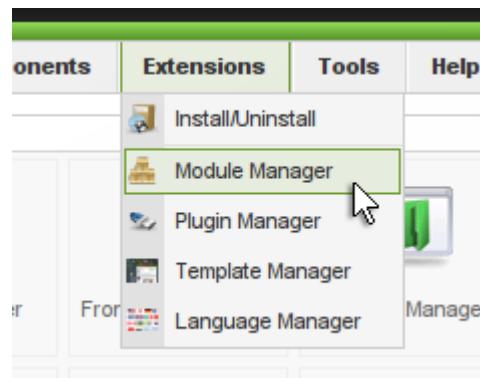

Step 1

Get into the administrator's control panel with your browser.

The URL usually looks like

<http://www.example.com/administrator/>

Step 2

Go to the menu *Extensions > Module Manager*

Step 3

Filter:		Module N
#	<input type="checkbox"/>	
1	<input type="checkbox"/>	Banners
2	<input type="checkbox"/>	Breadcrumbs
3	<input type="checkbox"/>	Banners
4	<input type="checkbox"/>	Random Image
		Search

Find the module you want to edit and click it.

Note: If you cannot find your module perhaps there are too many modules split in pages. Go through the pages to find your module, or use the filters to limit the list of modules on your screen.

Step 4

The screenshot shows the Joomla! administrator interface with the 'Module: [Edit]' screen for the 'mod_banners' module. The 'Details' tab is active, displaying configuration options such as Title (Banners), Show Title (Yes), Enabled (Yes), Position (left), Order (0:Banners), Access Level (Public), and ID (30). A description below states: 'The Banner Module allows to show the active Banners out of the Component within your site.' The 'Parameters' tab is also visible, containing advanced settings like Target (New Window with Browser Navigation), Count (1), Banner Client (Open Source Matters), Category (Joomla! Promo), Search By Tags (No), Randomise (Sticky, Randomise), Header Text, Footer Text, and Module Class Suffix (mstyle1). A yellow circle highlights the 'Save' button in the top right corner of the main toolbar.

Now you are in the page that controls the module.

From the Details area you can control many features including:

- Set the title of the module
- Show or hide the title
- Publish or unpublish the module by checking the Enabled attribute
- Set the position of the module

From the Parameters area you can control other features including the ability to

- Set the Module Class Suffix

To save your changes click the Save button ton the top right corner.
