- » Lightweight, modern and very fast-loading design
- » Joomla 1.5 Native
- » W3C XHTML 1.0 Transitional. W3C CSS Valid
- » Fully compatible IE7 +, Firefox 2 +, Firefox 3, Flock 0.7 +, Netscape, Safari, Opera 9.5, Chrome.
- » Delivered with Special 50% discount coupon to get JomSocial Component.
- » Delivered with files for Quickstart Installation.
- » Delivered with source Adobe .PSD files.

## Introducing New GK Framework

Since it's all about good vibrations, it's time to use new GK framework build in this template. Right now, you may be asking “- GKFramework? What is it?”

GK Framework is the next stage development of possibilities offered by GavickPro templates. Its basic advantage is the rise of flexibility in relation with the solutions previously used. GK Framework offers huge amount of modules, creating in main configuration three – column arrangement in which, each of column may contain some additional ones.

From the administrative panel level it is possible for the user to specify the whole template and the particular columns width. There is a possibility to specify those columns width which needed and the rest is adjusted automatically. Thanks to the framework template mechanism use, it is allowed to restrict the number of modules displayed without the need of switching them off in Module Manager.

Advanced users in the central file responsible for the framework usage (GKTemplate.php) are able to specify details as follows:

1. Styles used on particular modules positions (xhtml, raw, gkround, etc),
2. Margins, complements and the framing size for each of the main template's blocks,
3. Switching on/off columns' alignment in particular blocks,

Other innovative features:

1. Main body position may be specified and saved in relation with the component content (they may occur interchangeably or together on the positions specified),
2. Possibility of specification the default font size on the site,
3. Possibility of choice of font family used in the template,
4. New message for users IE6 browser and older versions

# 2 Overview files

## Quay - Overview files

Before we begin the explanation of the different files that compose the package, please have in consideration that **JomSocial Component** is not included in the supply and to get it you will have to acquire this application in <http://www.jomsocial.com/> taking advantage of the **special discount of \$50** through the coupon that you can see on the template download page.

However, we made arrangements to include a quickstart version for fast installation to enjoy quickly full characteristics of our demo. See respective chapter further ahead.

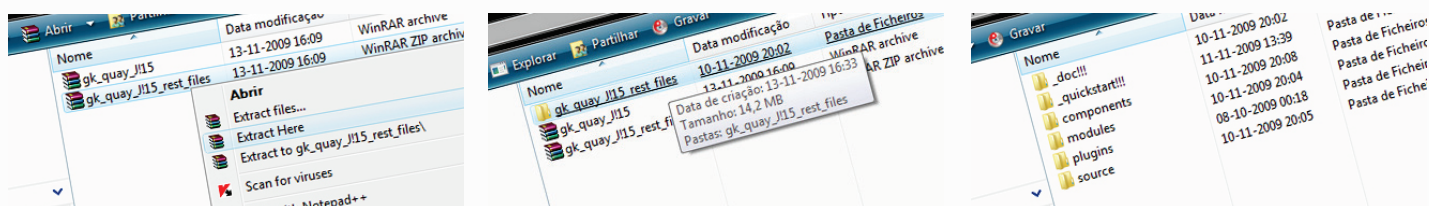

After having download all of the files from our commercial section, here's an brief content evaluation of the Quay package. Have in consideration that some of the used tools posses their respective support manuals, so we will provide orientation guidance for the respective installation and include also some screenshots about the configurations of all parameters of each module. To get additional informations of our extensions, please read the Support Manual included on the respective package.

[Here's a brief overview of the files available inside the "Quay" template package.](#)

You downloaded the following 2 compressed files:

- » **gk\_quay\_J!15.tgz** - This is the template file and for installation, please use Joomla installer.
- » **gk\_quay\_J!15\_rest\_files.zip**

Important!!! Before running... please unpack the file first.

After done the decompression, you will find inside the following files:

- » **\_doc!!!** "folder"

Here you can find the support manual for this template. For the extensions used on this template get the respective HelpFile file inside their package, after downloading them from our free download section.

- » **\_quickstart!!!** "folder"

Quay comes along with a QuickStart installation files, without JomSocial integrated.

For more information, please read the respective chapter.

## » Components "folder"

Contains instructions to download Tabs Manager GK3 Component used on Quay template.

## » Modules "folder"

**Gavick JomSocial Members Module** (*gk\_js\_members.zip*)

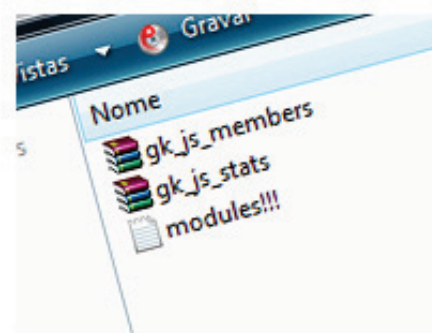

New and Exclusive Module for JomSocial Support. Displays JomSocial Members.

**Gavick JomSocial Stats Module** (*gk\_js\_stats.zip*)

New and Exclusive Module for JomSocial Support. Displays JomSocial Stats.

**Gavick News Show Pro GK1 Module**

Contains instructions to download our free News Show Pro GK1 module from our site.

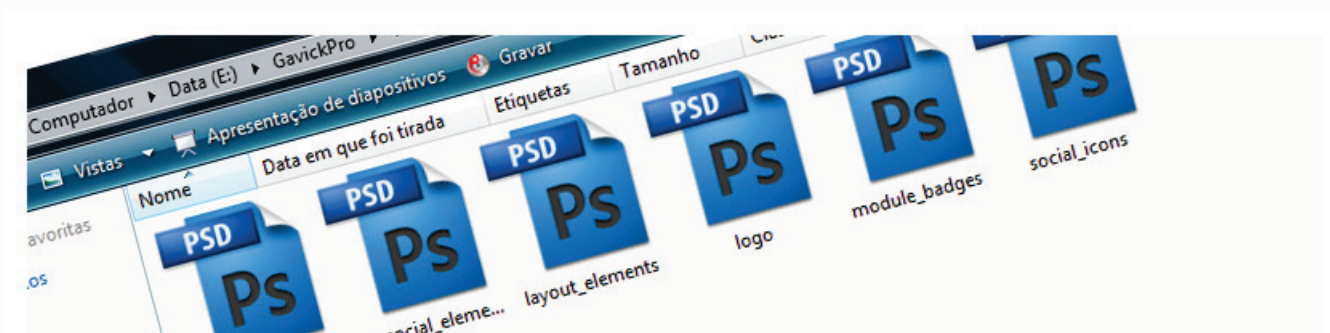

## » Plugins "folder"

Contains the new GK Typography plugin (*plg.gk\_typography.zip*) for WYSIWYG editor use. For respective installation, please use Joomla! Installer and then enable it on plugins manager.

## » Source "folder"

Contains psd. source files for Photoshop Graphic Editor, ready to be changeable for customization of your website design.

\* ie6\_warning.psd

\* jomsocial\_elements.psd

\* layout\_elements.psd

\* logo.psd

\* module\_badges.psd

\* social\_icons.psd

## Other files necessary and not available on package

As previously explained, to complete the necessary files for this project, you need to download our free extensions from our site. Get more informations on <http://tools.gavick.com> or download them on <http://www.gavick.com/downloads-area>

Here are the gavickpro extensions used on demo template:

### » Tabs Manager GK3 component (IMPORTANT! Unpack the tabsmanager\_3\_pack.zip file.)

GK Tabs Manager GK3 component (*com\_gk3\_tabs\_manager.zip*)

This is the Tabs Manager GK3 component and it's located inside of the component folder.

(For installation, please use the Joomla Installer).

GK Tab module (*mod\_gk\_tab.zip*)

This is the module is used for frontend content display, exclusive for Tabs manager GK3 version.

(For installation, please use the Joomla Installer).

### » News Show Pro GK1 module (IMPORTANT! Unpack the news\_show\_pro\_gk1\_pack.zip file.)

Inside you will find the following files:

GK News Show Pro GK1 module (*mod\_news\_pro\_gk1.zip*) -

This is the module for news and articles display

(For installation, please use the Joomla Installer).

## Notices!!!

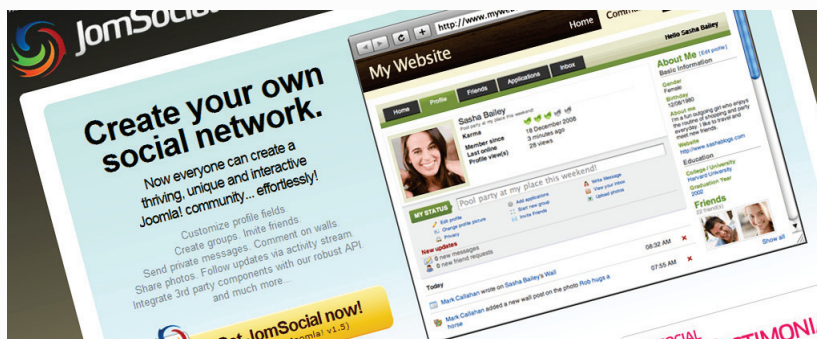

Font(s) used on the source files are not provided with the Template package, because they may have copyrights reserved.

The images used on demo might contain other proprietary copyright information that should be considered, so it's strictly prohibited the use, duplication or disclosure of this images.

Quay Template was created and designed especially for the incorporation of the powerful and popular **JomSocial Component Network System** for Joomla!1.5 from azrul.com team.

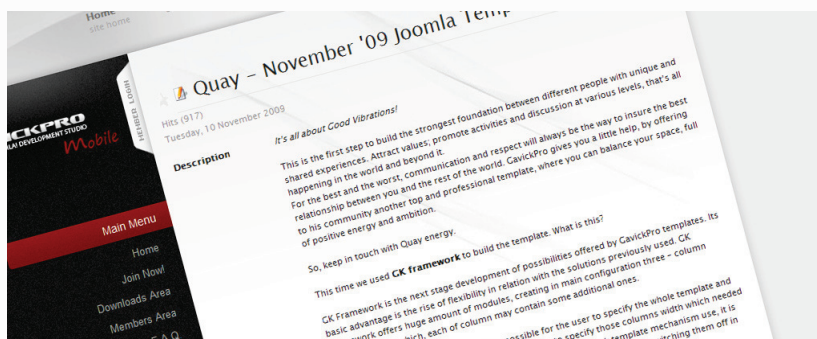

If you do not know this system, you can see the main features on the following website page from [www.jomsocial.com](http://www.jomsocial.com).

## Getting JomSocial with special conditions

As announced, as Member of the GavickPro Club you may purchase JomSocial with special conditions, benefits from a **discount of \$50 on Standard and Professional License**.

To know the code that allows special conditions, please visit our Quay download page in our business section.

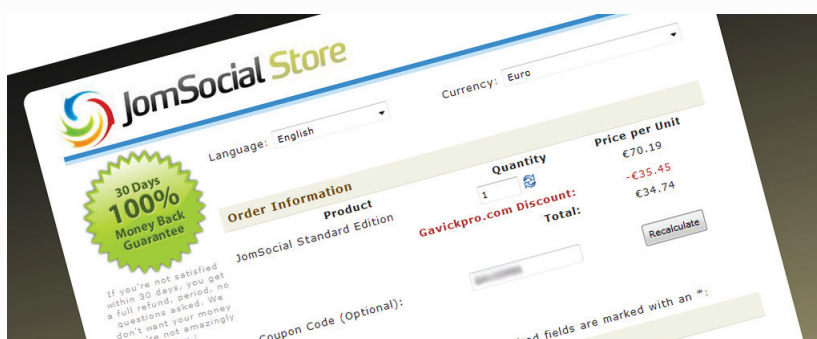

Then go to the [www.jomsocial.com](http://www.jomsocial.com), select the respective edition you want to buy and click “Buy Now” button.

It will redirect you to the secured purchase page where you can insert your coupon code from Gavick MemberShip.

On this page, you need to insert the code on “Coupon Code (Optional)” field and them, press “Recalculate” button.

Automatically, the final amount payable will be adjusted and it will be the result of \$50 subtraction (the screenshot shows example using euros currency).

## Quay Quick Guide Step by Step Installation

For experience users in Joomla!, the following list of tasks should be enough for a proper installation of the template and all extensions. Having as a principle that already have the latest joomla version installed on your site, follow these basic instructions:

**Step 1)** Install Quay template using the Joomla installer. File: *(gk\_quay\_J!15.tgz)*

**Step 2)** Head to Templates Manager and establish Quay as your default template.

**Step 3)** Again through the joomla installer, install **Tabs Manager GK3** component. You must first download it from our free download extensions tools. File: *(com\_gk3\_tabs\_manager.zip)*.

**Step 4)** Still from the Tabs Manager GK3 component package, install the respective module. File: *(mod\_gk\_tab.zip)*.

**Step 5)** Them install the **News Show Pro GK1** module using the Joomla Installer. File: *(mod\_news\_pro\_gk1.zip)*.

**Step 6)** To spice up your joomla content, install **GK Typography plugin** and enable it on Plugins Manager panel. File: *(plg.gk\_typography.zip)*.

**Step 7)** Install the new module **GK JomSocial Members**, especially created for this project. Use the Joomla installer. File: *(gk\_js\_members.zip)*. *You should find this file in the rest files package, on modules folder.*

**Step 8)** Install the new module **GK JomSocial Stats**, also especially created for this project. Use the Joomla installer. File: *(gk\_js\_stats.zip)*. *You should find this file in the rest files package, on modules folder.*

**Step 9)** Install the new module **GK JomSocial Stats**, also especially created for this project. Use the Joomla installer. File: *(gk\_js\_stats.zip)*. *You should find this file in the rest files package, on modules folder.*

## JomSocial Installation (purchase required - see previous chapter):

**Step 10 )** Once you get the JomSocial package and have it decompressed, install the corresponding component using joomla installer. File: *(com\_community\_pro\_1.5.243.zip)* *(lastest version when the quay was created)*.

**Step 11 )** From the JomSocial package, install also all the available modules.

**Step 12 )** Finally, install all the applications plugins of JomSocial *(don't forget to enable them on Plugins Manager panel)*.

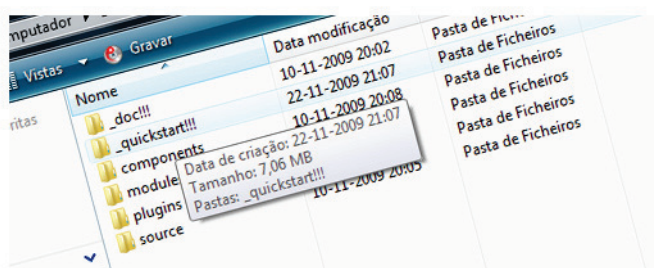

With all 12 steps completed, your website has all the necessary conditions for Quay template. Further ahead, we provide orientation of the demo modules positions and their respective configurations *(you can find screenshots added on the HelpFile package)*.

## How to set Quay as Gavick demo

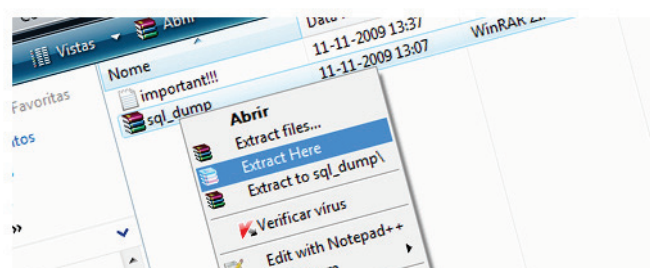

Given that this project was created to support JomSocial, with the necessary acquisition of commercial component, we can not provide regular quickstart version. However, we provide another way to easily install Quay template as shown in our demonstration.

After performing all the steps detailed in the previous chapter, please follow these instructions.

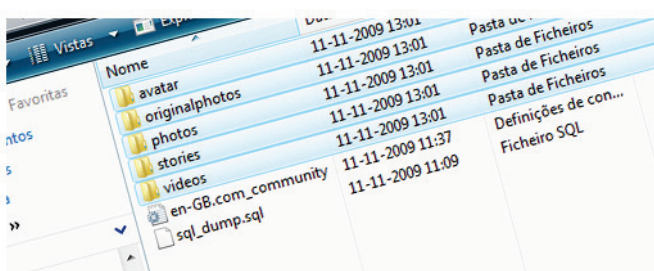

**Step 1** Among the rest files package, find `_quickstart!!!` folder and enter.

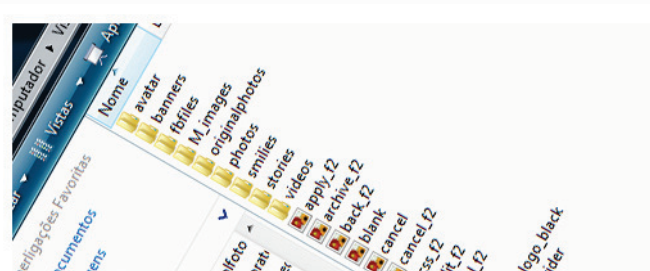

**Step 2)** Unzip `sql_dump.zip` file and get inside of `sql_dump` folder.

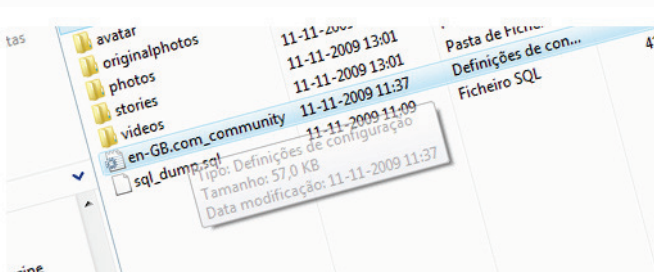

**Step 3)** Select and Copy all the folders available. This contains images from JomSocial demo content.

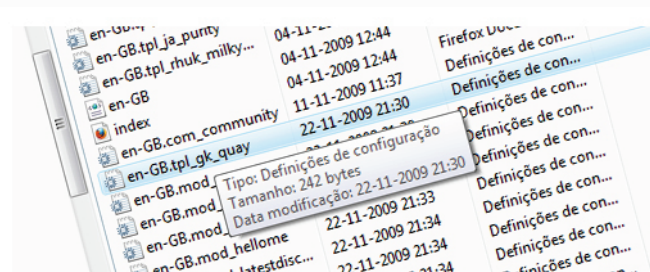

**Step 4)** Copy and paste all the folders inside the `images` directory of your Joomla installation.

**Step 5)** Return to `sql_dump` folder and copy `en-GB.com_community.ini` file.

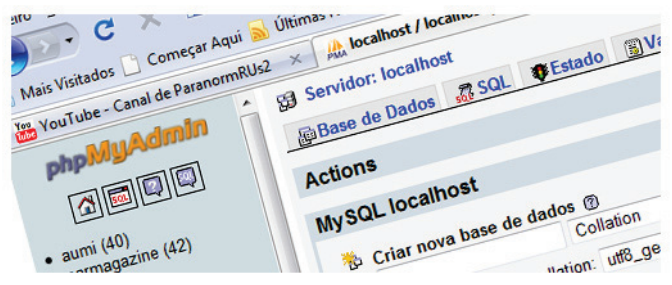

**Step 6)** Paste `en-GB.com_community.ini` file into languages directory on your website - <http://www.yourwebsite.com/language/en-GB/>

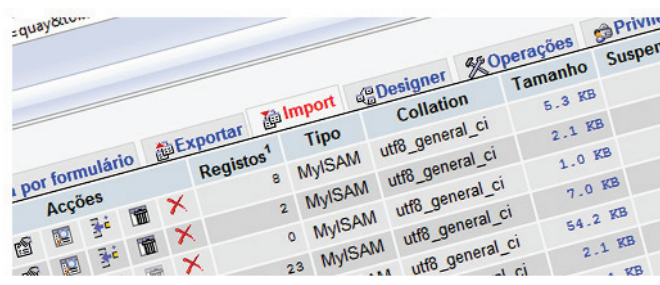

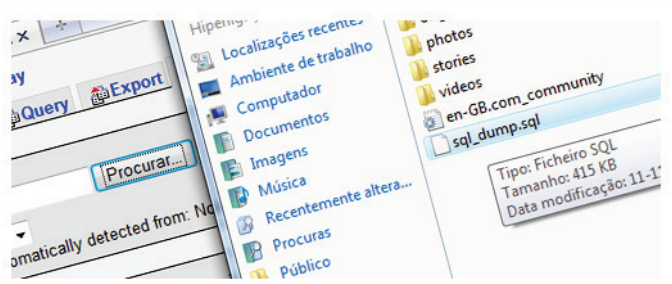

**Step 7)** Access your control panel provided by your host, open phpMyAdmin and select the database which contains your Joomla installation.

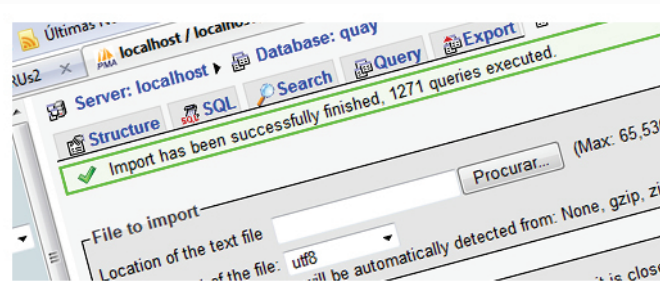

**Step 8)** Click the "import" menu tab to enter inside the import board.

**Step 9)** Using the input field, locate the locally sql\_dump. sql file and press the button to import.

**Step 10)** If all goes well, a message will appear saying "Import has been successfully finished..."

Once implemented all the steps, we finally can see the website exactly as shown on our demo template. Using username as **admin** and password as **demo**, you can access the administration page and quickly get knowledge of all the settings configured in the demo.

## Video Tutorial: QuickStart Installation

If you still have any questions about how to install the quickstart, try to see the video tutorial we have prepared by clicking in the following address or on the right screenshot:

[http://tutorials.gavickpro.servery.pl/video/template/quay\\_nov2009/](http://tutorials.gavickpro.servery.pl/video/template/quay_nov2009/)

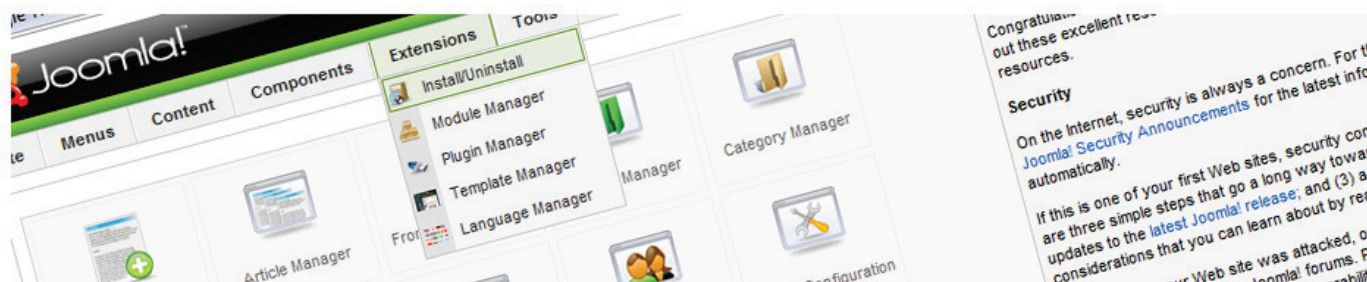

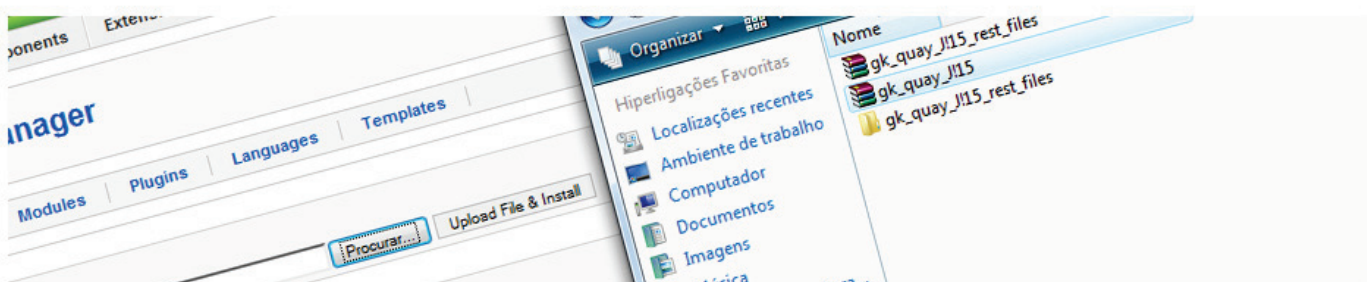

# 6 Quay Template Installation

## Quay template installation

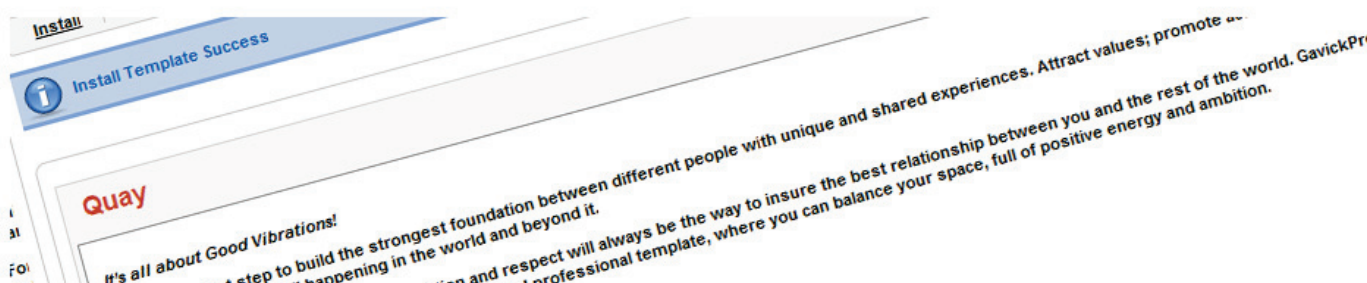

After you have installed the Joomla! 1.5 version, navigate to your Joomla! Administrator and enter inside the administrative panel on your Joomla website. From the top menu, select “[Extensions > Install/Uninstall](#)”.

Click the ‘[browse](#)’ button, select the template file ([gk\\_quay\\_J115.tgz](#)) and press ‘[Upload File & Install](#).’

Message will be displayed saying ‘[Install template Success](#)’. and showing an overview of the template.

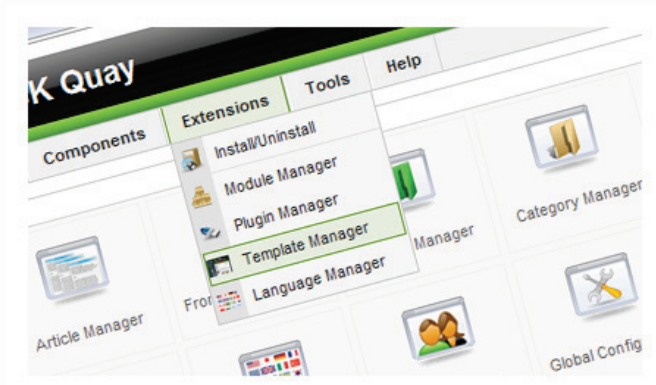

You now have the template installed, but you need to assign it as your default template of your website. To do this, navigate to “[Extensions > Template Manager](#)” and set it as default template.

With the template installed and assign, let's now see all the parameters available on the template for admin control.

## Quay - Template Parameters

Quay comes with several parameters that you can configure as your needs. To access the template parameters, navigate to “[Extensions > Template Manage](#)” and select [gk\\_quay](#) template. Press “[edit](#)” option or just click on template link as you be able to see the following parameters table.

### Presets template parameters:

#### Template color:

Select default template color (Blue - Green/Purple - Red).

#### Show mainbody on frontpage:

Show or hide mainbody on frontpage.

#### Mainbody position:

Set mainbody position to the following options:

- . No mainbody
- . Mainbody or component
- . Mainbody before component
- . Mainbody after component

#### Template skeleton:

Set up the structure of the template.

- . Without columns.
- . Left column.
- . Right column.
- . Both columns.
- . Two columns + content.
- . Content + two columns.

### Dimensions:

In this section you can configure width in pixels of all template blocks.

### Fonts:

#### Font families:

Select font families for frontend in template.

#### Font size:

Select font size used in template.

### Features:

#### IE6 alert:

Given that this template does not have support for IE6, activating this option, the visitor of your page will automatically see internet information on IE6, advising him to upgrade his browser to IE7 or higher version.

#### Logo as image:

If you want to have normal image instead of link with background - enable this option. **IMPORTANT: when you enable this option, style change won't change your logo till page refresh.**

Also, enable this option if you want to include your logo in print format page.

#### Floating panel:

Enable this option if you want to show floating panel with style switcher and social icons

## Floating panel animation:

Enable this option if you want to show floating panel with autoanimation.

## Style switcher:

Enable this option if you want to enable style switcher in floating panel.

## Copyright:

If you need to change frontend copyright's to your own, here you can easily change the footer content.

## Social Icons:

### Social icons:

Enable this option if you want to enable social icons in floating panel.

The following fields can enable or disable their social icons available and you can add their respectives links.

## Menu:

### Menu type:

Select main menu type: (*Moomenu - Suckerfish menu - standard menu*).

## MooMenu only:

### Menu name:

Name of menu to load on frontpage (Important! Must be unique ID name - check menu manager board).

### Menu speed:

Set speed of menu animation.

### Menu animation:

Select type of menu animation transition between 34 different types.

### Menu width animation:

Use width animation in menu.

### Menu height animation:

Use height animation in menu.

### Menu opacity animation:

Use opacity animation in menu.

#### Parameters

The parameter file 'templates/gk\_quay/params.ini' is **writable!**

○ Joomla Core Modules
○ GavickPro Modules
○ JomSocial Modules

Thanks to the new framework, Quay template provide all the following modules positions offering a wide range of options to customize your template.

# 10 Template Module Positions

## Module as Component (on mainbody).

Our templates allows you to display any Module as Component (on component mainbody position). It will display full width or not, depending on the module width configuration. If you have any doubt of this feature, please ask us for support in GavickPro Official Forum.

## Modules Variations

Quay template comes with embed style modules positions and with the following modules suffix.

Here are some examples of modules suffix:

By default, the right screenshot show the style of the module with the module title enabled.

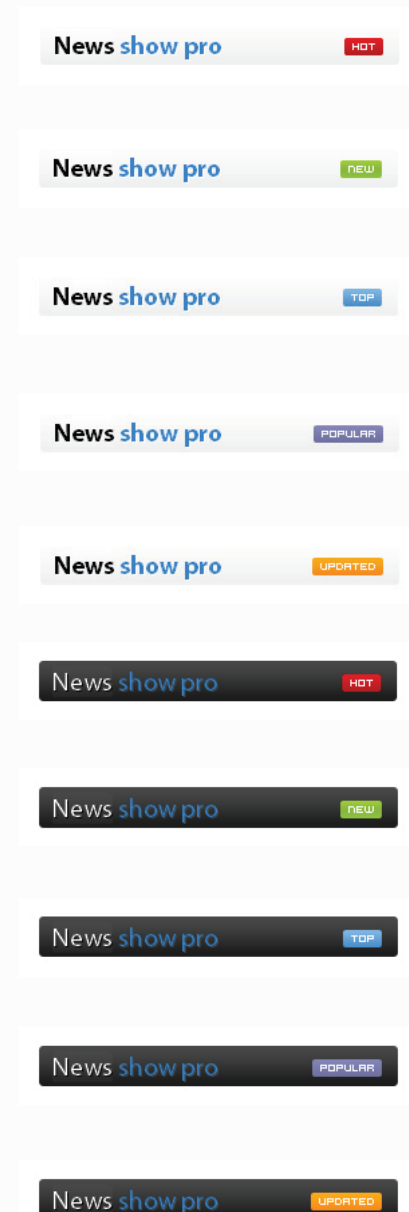

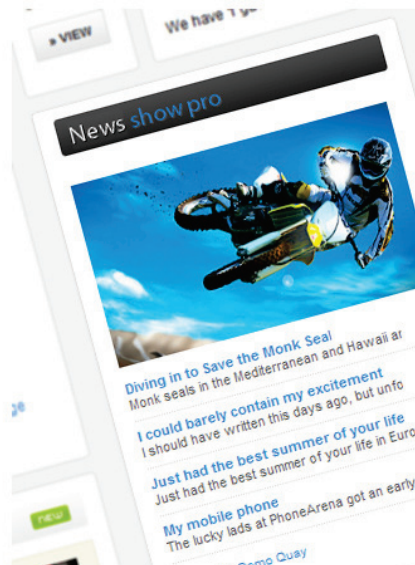

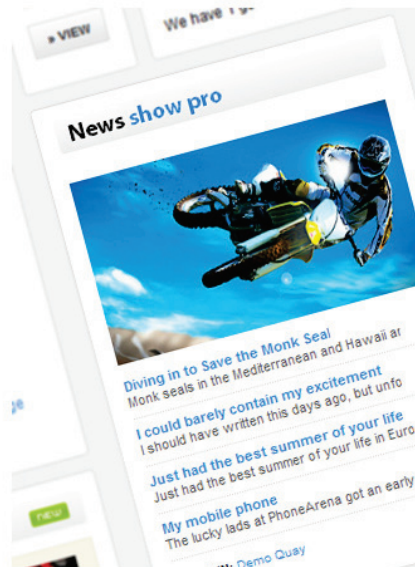

**Badges:** All styles can be supplemented with badges on the right side module header. Here are the following badges suffix (see examples on respective order on the right side of this page):

[space]\_badge b-hot  
[space]\_badge b-new  
[space]\_badge b-top  
[space]\_badge b-popular  
[space]\_badge b-updated

With module suffix **\_ver1**, the module will have the style shown on the right.

Also, you can add badges suffix on this variation. See examples on respective order on the right side of this page):

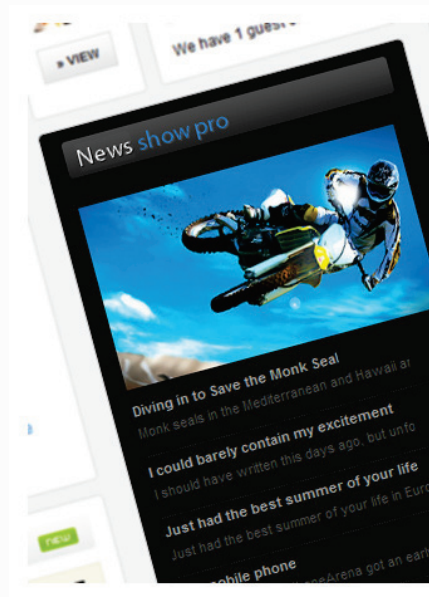

\_ver1 [space]\_badge [space]b-hot  
\_ver1 [space]\_badge [space]b-new  
\_ver1 [space]\_badge [space]b-top  
\_ver1 [space]\_badge [space]b-popular  
\_ver1 [space]\_badge [space]b-updated

With module suffix **\_ver2**, the module will have the style shown on the right.

Also, you can add badges suffix on this variation. See examples on respective order on the right side of this page):

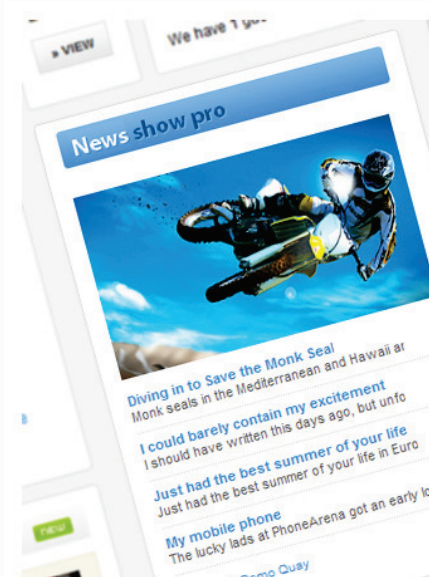

**\_ver2[space]\_badge[space]b-hot**  
**\_ver2[space]\_badge[space]b-new**  
**\_ver2[space]\_badge[space]b-top**  
**\_ver2[space]\_badge[space]b-popular**  
**\_ver2[space]\_badge[space]b-updated**

With module suffix **\_ver3**, the module will have the style shown on the right.

Again, you can add badges suffix on this variation. See examples on respective order on the right side of this page):

**\_ver3[space]\_badge[space]b-hot**  
**\_ver3[space]\_badge[space]b-new**  
**\_ver3[space]\_badge[space]b-top**  
**\_ver3[space]\_badge[space]b-popular**  
**\_ver3[space]\_badge[space]b-updated**

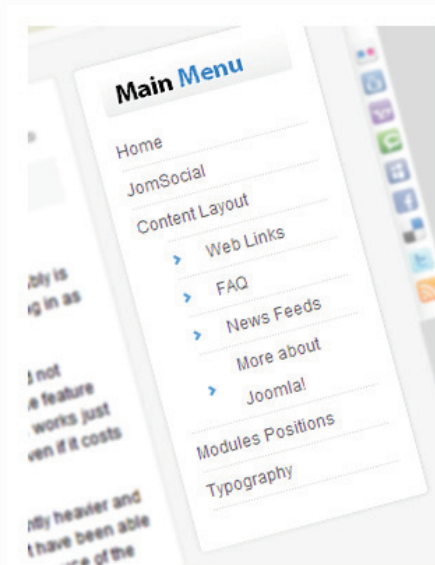

News Show Pro have one specific optional suffix **nsprocool**. With this style, module will be shown as the right screenshot. Also, you can add badges suffix on this variation.

**[space]nsprocool[space]\_badge[space]b-hot**  
**[space]nsprocool[space]\_badge[space]b-new**  
**[space]nsprocool[space]\_badge[space]b-top**  
**[space]nsprocool[space]\_badge[space]b-popular**  
**[space]nsprocool[space]\_badge[space]b-updated**

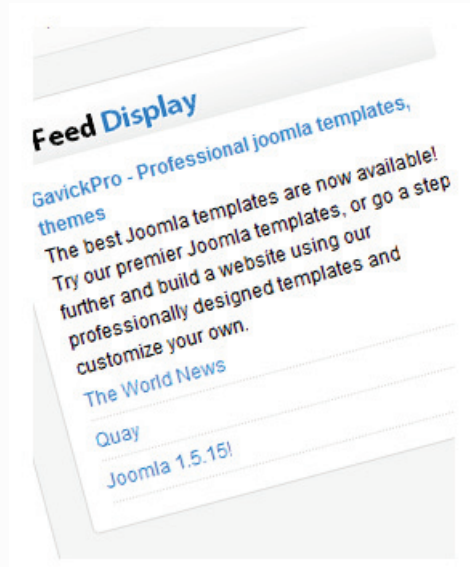

Apart from all these styles, also have available the `_menu` and `_text` module suffix.

The same principle on badges applies to these styles:

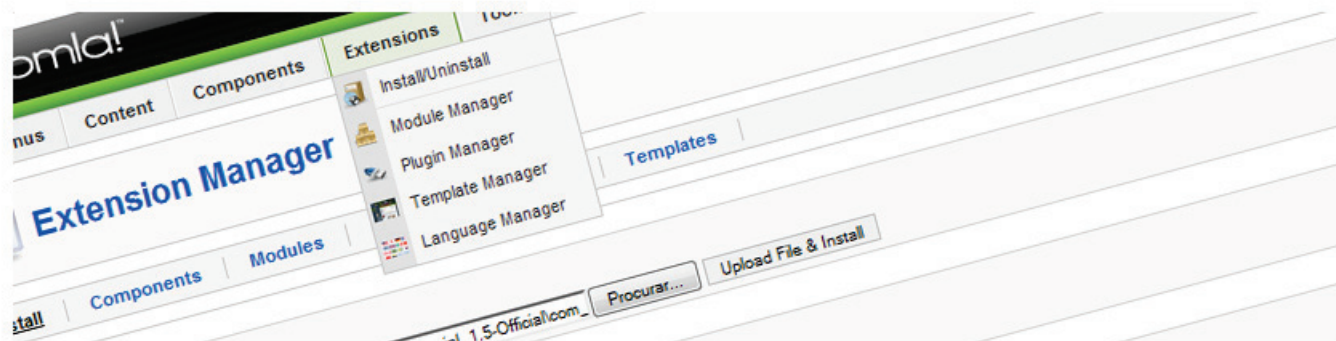

`_menu[space]_badge[space]b-hot`  
`_menu[space]_badge[space]b-new`  
`_menu[space]_badge[space]b-top`  
`_menu[space]_badge[space]b-popular`  
`_menu[space]_badge[space]b-updated`  
`_text[space]_badge[space]b-hot`  
`_text[space]_badge[space]b-new`  
`_text[space]_badge[space]b-top`  
`_text[space]_badge[space]b-popular`  
`_text[space]_badge[space]b-updated`

## JomSocial Component Installation.

Component JomSocial installs itself as a normal extension and have it's own HelpFile, provided by the creators of this excellent component - Azrul Studio. If you want to know only how to install, please follow these steps

From the top menu, select the Joomla installer "[Extensions > Install/uninstall](#)"

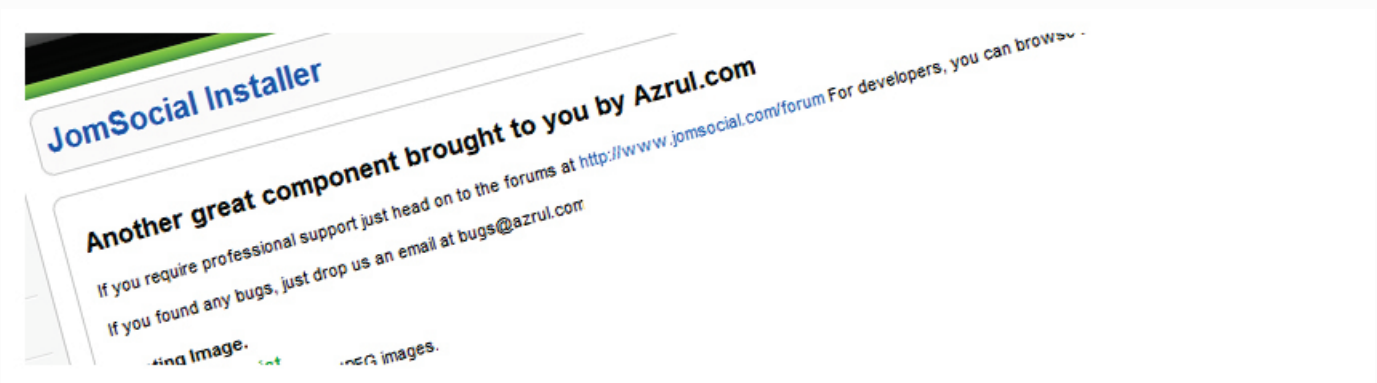

Select `com_community_pro_1.5.243.zip` or other version and press "[Upload File & Install](#)"

On the first board, press “**Complete your installation**” button and follow next screens. Please, do not interrupt the installation process until is completed.

When you enter on JomSocial Installer, it will install itself automatically, so you will not need to perform any particular order.

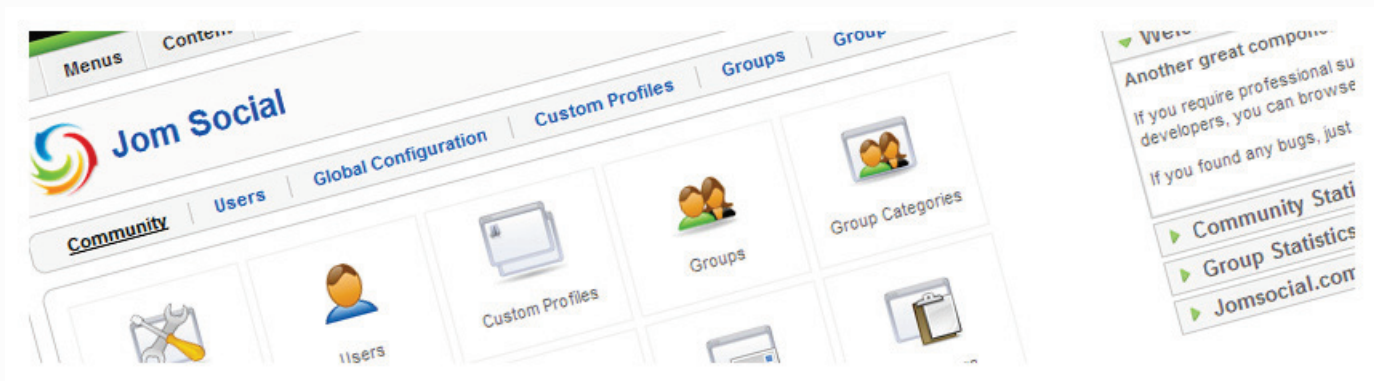

Let the installation process comes to an end.

With the installation successful and fully completed, you should see this next page like the screenshot shows.

The administration of JomSocial can be accessed via the top menu “Components > JomSocial”.

## JomSocial Modules and Applications Installation.

After the component is installed, it is time to install the modules and applications desired. In the case of our demo setup, we chose to install all. These extensions are located inside the folder modules and applications. Again, use the installer joomla to install them.

For applications, remember that you must activate this plugins on the plugins manager panel.

Inside JomSocial!Modules folder, on DemoModulesConfigurations package, you find pictures of the settings of the JomSocial modules used in our demo.

## Tabs Manager GK3

Tabs Manager GK3 is an amazing tool to display content on tabs, like articles, modules or even custom XHTML content. You need to download this component from our free download section on <http://www.gavick.com/downloads-area.html>.

Please, before installation unpack this file first.

### Component Installation

Using the Joomla! Installer, get `com_gk3_tabs_manager.zip` file and select “upload and install”. A message will appear saying ‘Upload Component - Success’ and it will show you an overview of the component.

Warning! You cannot link directly the component using joomla menu for frontpage display.

### GK Tabs GK1 Module Installation

For front end display of the Tabs Manager GK3 groups content, please use the Gavick Tabs GK1 Module.

Using the Joomla! Installer, search for the `mod_gk_tab.zip` and select “upload and install”. A message will appear saying ‘Install Module Success’. You can now see this module available on “Extensions > Module Manager” list.

### GK Tabs GK1 Module Configuration

If you need to check our module configuration used on the demo template, please open the `DemoModulesConfigurations` folder available on the package and inside of `TabsManager!Module` folder you will find an screenshot for your consultation.

**IMPORTANT!!!** - In case you find problems with module style (i.e. - strange border around module), you can disable module CSS in advanced parameters. By doing this, it should solve your problem.

For further detail information, please read the Tabs Manager GK3 HelpFile provided in the `_doc!` folder package.

#### Use module CSS:

Disable this option when you are using template with built-in styles for this module.

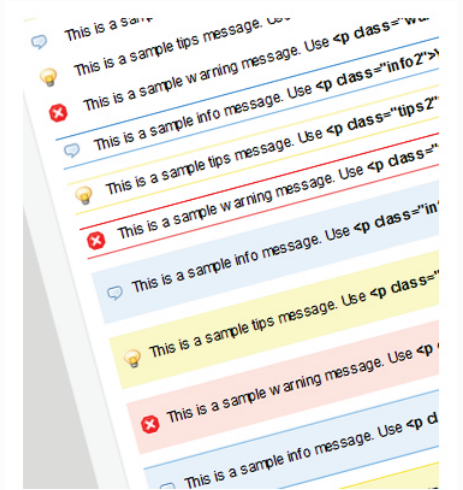

# 13 GK Typography

## GK typography plugin overview

We implemented this new feature extremely useful for the use of typography, specially created for the template. Like in all Joomla templates, characterization of the text style is added to enrich even more the respective content. However, we may say that some Users have not been motivated to use this potential, perhaps because this information was not easily available.

So, in order to promote and facilitate the use of the typography, we added a special plugin that will allow Users to set easily any typography style in text.

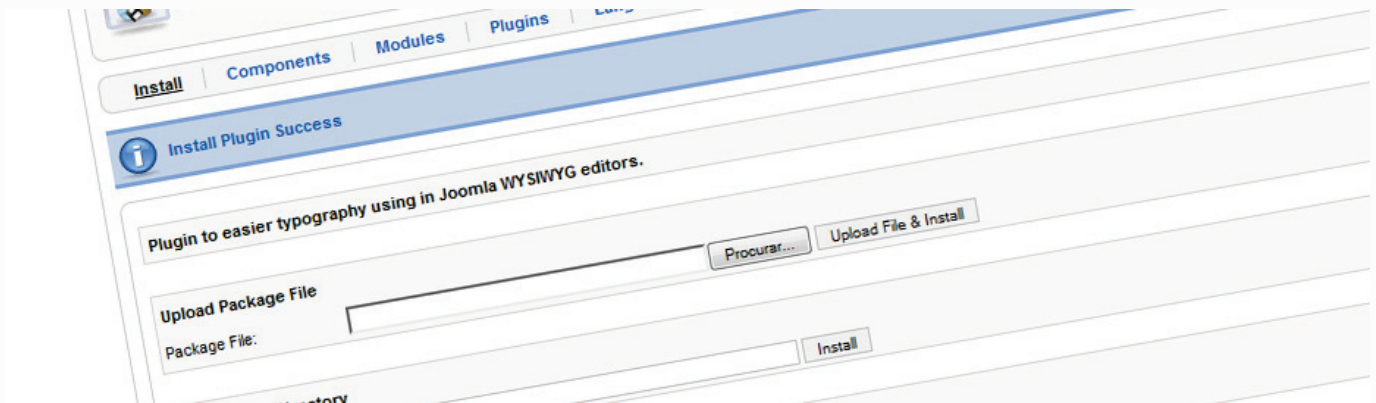

This new feature will be implemented in all our future templates and also on our old templates from 2008 to 2009.

## GK typography plugin installation

Go to “[Extensions > Install/Uninstall](#)” and select the [plg.gk\\_typography.zip](#) file, available inside the plugins folder on the [gk\\_elvesocial\\_J!15\\_rest\\_files](#) package. Upload file and install.

A message will appear saying ‘[Install Plugin Success](#)’ and it will show you an small description of the plugin.

Next, you will need to enable it on the Plugin Manager of your Joomla.

So, navigate “[Extensions > Plugin Manager](#)” and find the [Button - GK Typography](#) Plugin and enable it.

## GK typography plugin How to Use

It's very easy to work with, as you be able to see.

So, let's start by creating a new article. Go to "[Content > Articles Manager](#)" and press new button. Now you will see the normal [WYSIWYG joomla editor](#) and on the bar above you will find the [GK Typography button](#).

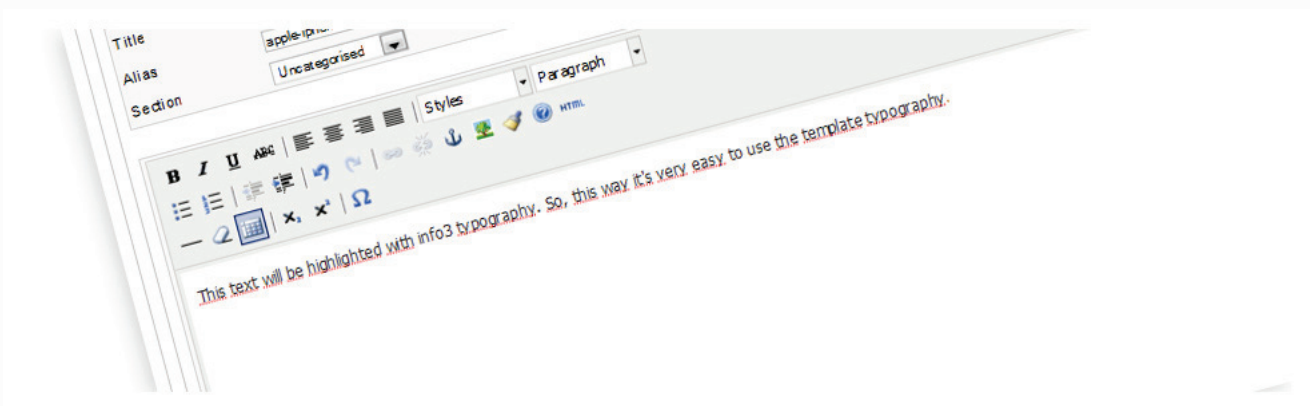

Click on it and a modalbox will popup with all the Typography added to this template. Scroll down top select the desired one, and press the respective text style on the left column.

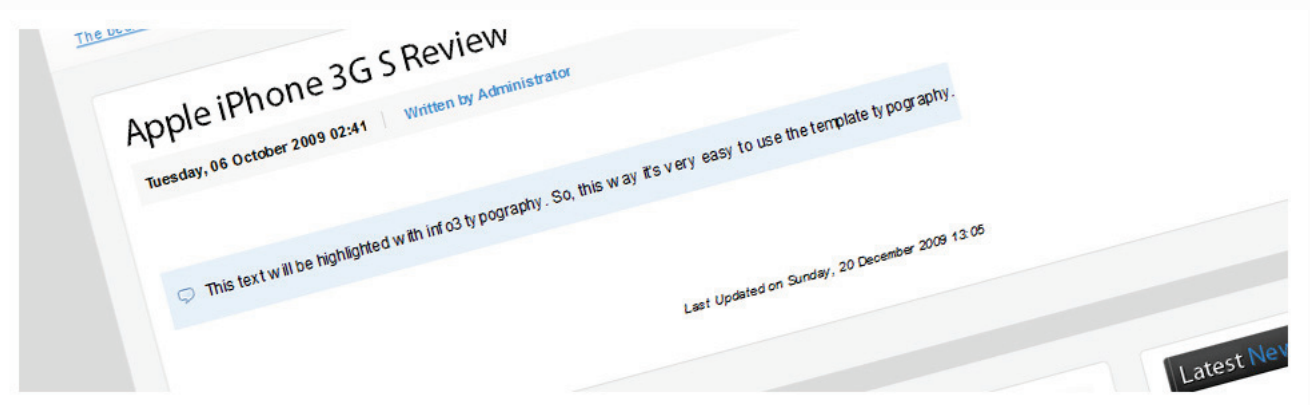

For example, i will select the “info3” typography style. So, i just press on it and immediatly text will be added on the text area.

Now, i just need to replace the existing text with my own and save.

So, let's see the result on frontpage.

Nice, right?

Easy and friendly interface, this will be very important to help you to create stunning articles styles.

Here are some recommendations that might help you.

### Are you new in Joomla?

If you are new in Joomla, we strongly recommend that you perform some tests and experiences to fit into this excellent CMS (Content Management System), and visit the official support forum of [www.joomla.org](http://www.joomla.org) for any problem direct relationship. GavickPro Studio is not responsible for Joomla, neither gives respective support. Nevertheless, if possible, we will be happy to help you in our support forum.

### Building a new Website ?

If you are building a new website and if you like our demo, we strongly recommend the use of QuickStart version, and from this start change it with your own content and easily make any necessary configuration adjustments.

### Get quick acquaint with Quay template

In all cases, if you are a new or already experience user, we always recommend experimental version, using free popular local server like XAMPP or WAMP (*you can find easily information on internet about this excellent tools for website development*) or if you prefer, an online test installation. This way, you be able to fit more fast and easily in some tools configurations, modules positions and other particular details that you need to know.

### You already have a website and want to use this template ?

If you choose to install this template in an already existing website, make sure that you have the latest version of Joomla (*present version - J!1.5.15*). If not, please upgrade to insure compatibility with our template and extensions. Naturally, if this is your case, you must install all files individual, from template to components, modules and plugins. Nevertheless, please remember that the QuickStart version is still important ally for orientation. Just remember the previous recommendations.

### Do you have some problems with our extension?

Some usual problems reported on our support forum are script conflict from 3th party extensions. If you know Joomla enough, you know there's an huge amount of solutions and extensions available for free or commercial from other teams or developers. Naturally, you will search others extensions to complete some particular functionality to fulfill your website needs. But understand that we are responsible only for our template and extensions, and we cannot guarantee that all 3th party tools will work perfectly with our project. So, it's in your hands to choose those extensions on Joomla Community. Nevertheless, ask for support in our forum, and if possible we will try to provide your solution.

Another usual problem identified in our forum is related with permissions on files and directory. Some tools need specific files to have rewrite or read permissions, so you might find some problems if you don't have this permissions set. Notice that we cannot control your server security configurations, but we can provide directions where you must change this permissions. If you are unable to change it, we advice you to contact your host provider.

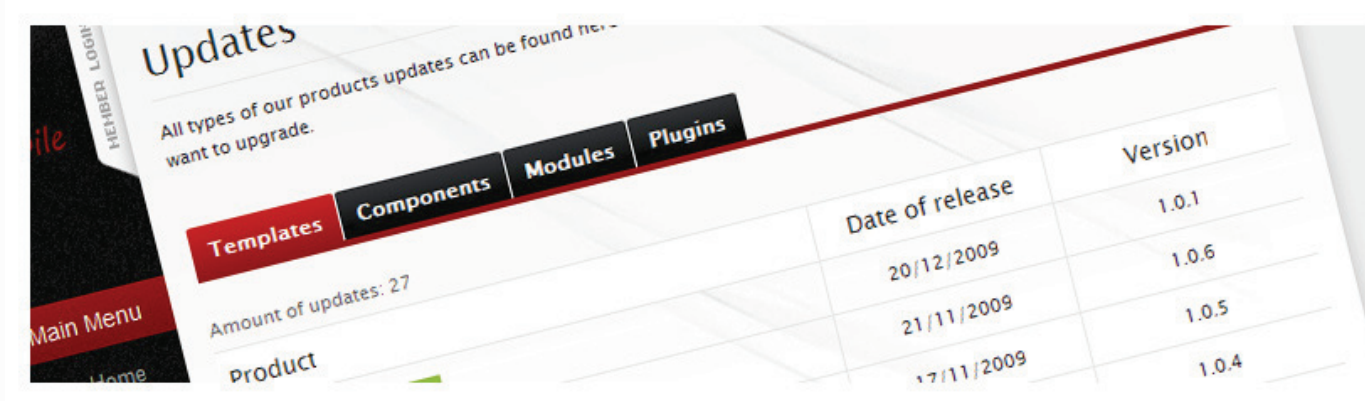

### Keep always updated!

We strongly recommend regular visits to [update.gavick.com](http://update.gavick.com), where you can find the latest updates of our templates, components, plugins or modules. If you have any problem, please be sure if the solution is not already available. This way will avoid waste time, searching or asking for solutions in our forum support.

## Keep always updated!

We strongly recommend regular visits to <http://www.gavick.com/updates.html> where you can find the latest updates of our templates, components, plugins or modules. If you have any problem, please be sure if the solution is not already available. This way will avoid waste time, searching or asking for solutions in our forum support.

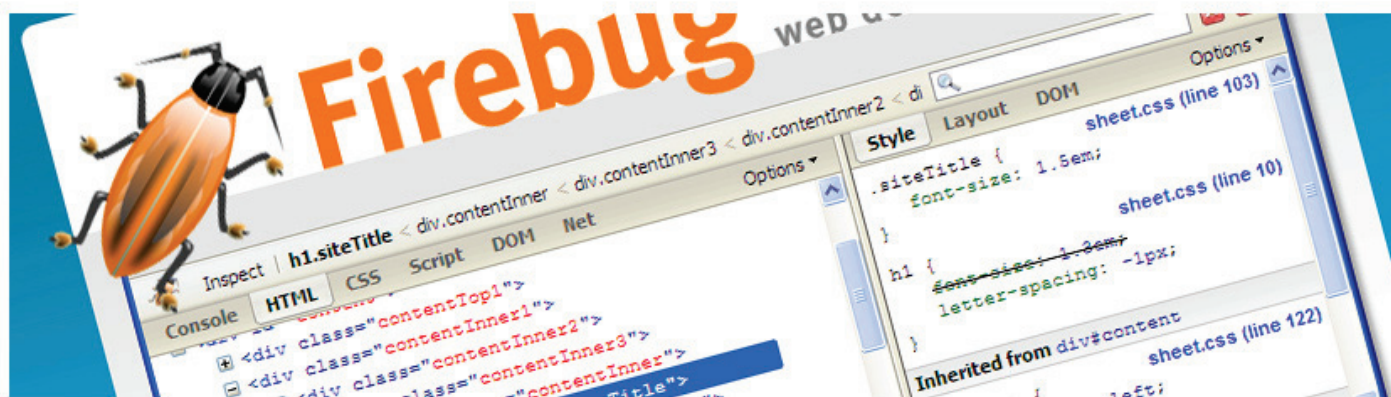

Product	Date of release	Version
	20/12/2009	1.0.1
	21/11/2009	1.0.6
	17/11/2009	1.0.5
		1.0.4

## Need some small Style customization adjustment?

You can always request support to our Moderators or Developers, but you need to take in mind that this is customization and not regular support service. In future, GavickPro might provide personal customization services and installation support, but it's not yet available as standard service. The Developer Membership is excluded, since this subscription already have this type of support, if needed. Nevertheless, we will always try to help you.

If you have some experience in CSS styling, we strongly recommend the use one of the most powerful tool for WebDesigners, available for free in **FireFox addons** - The **FireBug** - without any doubt, you can't find most powerful ally if you are building a website.

## What is the better way for me to report my problem in the support forum?

If you need help on some issue, please report on our forum in the most objective way, be polite and preference in english language.

Always identify your URL for faster support, because in most cases our support team needs to see the problem.

## Need to contact Us?

Besides our official forum support, you can also contact us by Skype. Please check our contact page and we will reply as soon as posible.
