

I. How to setup the template with demo content on NEW Joomla 1.7 installation

!!! ATTENTION !!!

If you import the SQL database, all your current content will be lost

1. Make a clean installation of Joomla! 1.7
2. Install our template via Joomla admin panel
3. Install all the extensions from unzipped folder > Joomla 1.6 / 1.7 > Extensions
4. Copy "image"-folder into your joomla root installation
5. Login to your phpmyadmin via cpanel or another server database admin panel.
6. Navigate to the database your Joomla install is using
7. Next, click import and import the SQL dump from folder > Joomla 1.6 / 1.7
8. For Joomla 1.7 you have to use the >> jp_your_template_17.sql

!!! ATTENTION !!!

Your Database Prefix must set to (**jos_**) >> See picture below.

You can check the Prefix from Joomla Admin Panel:

>> Global Config > Server > Database Prefix

The screenshot shows the Joomla! Global Configuration interface. The 'Global Configuration' header is highlighted with a red box. Below it, the 'Server' tab is selected and highlighted with a red box. The 'Database Settings' section on the right contains the 'Database Tables Prefix' field, which is set to 'jos_' and highlighted with a red box. Other visible settings include 'Path to Temp Folder', 'Gzip Page Compression' (set to No), 'Error Reporting' (set to System Default), and 'Force SSL' (set to None).

!!! ATTENTION !!!

Username and Password has changed after importing the SQL:

Username = admin

Password = password

II. How to setup the template with demo content on EXISTING Joomla 1.7 installation

!!! ATTENTION !!!

If you import the SQL database, all your current content will be lost

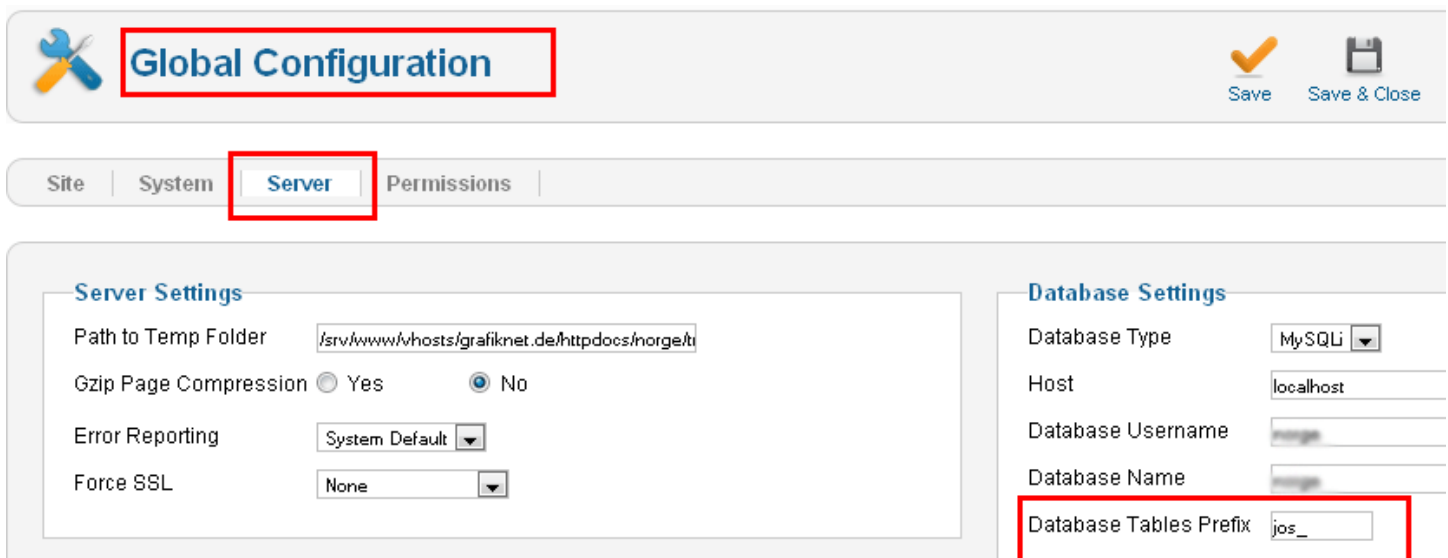

1. Make a clean installation of Joomla! 1.7
2. Install our template via Joomla admin panel
3. Install all the extensions from unzipped folder > Joomla 1.6 / 1.7 > Extensions
4. Copy "image"-folder into your joomla root installation
5. Login to your phpmyadmin via cpanel or another server database admin panel.
6. Navigate to the database your Joomla install is using
7. Select all tables and **drop them**. (NOTE: This will delete all your website data on this current Joomla install)
8. Next, click import and import the SQL dump we provide from folder > Joomla 1.6 / 1.7
9. For Joomla 1.7 you have to use the >> jp_your_template_17.sql

!!! ATTENTION !!!

Your Database Prefix must set to (**jos_**). >> See picture below

You can check the Prefix from Joomla Admin Panel:

>> Global Config > Server > Database Prefix

The screenshot shows the Joomla! Global Configuration interface. At the top, there's a 'Global Configuration' header with a red box around it. Below it, a navigation bar has 'Server' selected and highlighted with a red box. The main content area is divided into two panels: 'Server Settings' and 'Database Settings'. In the 'Database Settings' panel, the 'Database Tables Prefix' field is highlighted with a red box and contains the text 'jos_'.

Field	Value
Path to Temp Folder	/srv/www/vhosts/grafiknet.de/httpdocs/norge/it
Gzip Page Compression	<input type="radio"/> Yes <input checked="" type="radio"/> No
Error Reporting	System Default
Force SSL	None
Database Type	MySQLi
Host	localhost
Database Username	joomla
Database Name	joomla
Database Tables Prefix	jos_

!!! ATTENTION !!!

Username and Password has changed after importing the SQL:

Username = admin

Password = password
