

## MetaMorph Module Positions

MetaMorph has been constructed with an assortment of 28 module positions allowing for versatility and flexibility. Most of these module positions are fully collapsible meaning that if there are no modules published in particular area, that module area will not be shown.

MetaMorph includes built in style and implementation for the extra module positions. These module positions are not defined in a default Joomla install and are listed below:

search, user10, user11, user12, user13, user14 and user15

You can add these additional module positions by going to "Site > Template Manager > Module Positions" in your Joomla administrator. Add each of the additional module positions by entering the name in the "module position" field. Then click Save. Now your extra module positions will be ready for you to place module content into, MetaMorph will take care of the rest.
